*At a time when we have come face to face with adverse weather patterns, rising sea levels, coastal erosion and other signs of global warming, there is an urgent need for Trinidad and Tobago to make its contribution to reducing global temperatures. Furthermore, it makes good business sense to seize the opportunities to reduce energy consumption, introduce new technologies to become more energy efficient and to reduce greenhouse emissions by moving away gradually from carbon based fuels to renewable energy. Finally, with the existing situation where the demand for natural gas far out ways the supply and where natural gas can still produce significant value in terms of exports and foreign exchange from LNG and methanol, Trinidad and Tobago needs to embark quickly on programmes for the use of renewable energy in transport, power generation and industry.*

*Please note that parking is a challenge in the area and the wrecker is active. Please try to walk, car pool or be dropped off. Alternatively, please ensure parking outside of yellow lines.*
